ART UNIT	PAPER NUMBER
----------	--------------

2615

DATE MAILED: 09/07/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.		Applicant(s)	
	09/345,669		MINEMIER, RONALD K.	
	Examiner		Art Unit	
	Nhan T. Tran		2615	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 17 August 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-6,8-13,15-17 and 19-30 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-6,8-13,15-17 and 19-30 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/17/2005 has been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 1-6, 8-13, 15-17, 19-30 have been considered but are moot in view of the new ground of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-6, 8-13, 15-17, 19-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Therrien (US 4,523,231) in view of Fossum et al (US 6,611,288).

Regarding claim 1, Therrien discloses a method of detecting sensing element arrays comprising: reading out a frame of sensing element data from an array (21); and determining a number of spatial defects (a number defective pixels, wherein each defective pixel is a spatial defect) by analyzing the data during the frame read out. See Abstract, Figs. 1-7B and col. 2, lines 14-50.

Therrien does not explicitly disclose that determining a number of spatial defects involves a pair of adjacent defective pixels. In Fossum reference, a plurality of spatial defects involving at least a pair of adjacent defective pixels within a row, a column, 3x3 area, 5x5 area and other shapes of defective pixel areas are detected and counted so as to effectively identify a group of defective pixels. See Fossum, col. 3, lines 1-32.

Therefore, it would have been obvious to one of ordinary skill in the art to modify the imaging in Therrien to incorporate the teaching of Fossum for determining not only a plurality of single defective pixels but also determining a group of defective pixels involving at least a pair of adjacent defective pixels within predefined areas such as a row, a column, 3x3 area, 5x5 area, etc. so as to effectively identify spatial defects as a group of defective pixels, thereby improving processing speed during defective pixel correction.

Regarding claim 2, Therrien also discloses that the sensing element array is an imaging array and that the method further including programmably (by means of hardware) setting high and low limits for pixel intensity values (Fig. 4; col. 7, lines 44-52 and col. 8, lines 17-25, wherein each reference digital signal has been programmed for comparing at the comparators).

Art Unit: 2615

Regarding claim 3, it is clear in Therrien that high and low limits are set based on illumination conditions (lamp off and lamp on). See Fig. 4; col. 7, lines 44-52 and col. 8, lines 17-25, wherein each comparator is set to a digital reference signal limit corresponding to each illumination condition.

Regarding claims 4 & 5, see the analyses of claims 2 & 3.

Regarding claim 6, it is also clear in Therrien that defective pixels in the focal plane of the pixel array 21 are all identified (col. 2, lines 25-50).

Regarding claim 8, Fossum teaches that a programmable offset of 5 pixels around x and y of a central pixel is set to identify defective pixels that are closer together in the area of 5x5 (col. 3, lines 1-23) to enable a defective pixel area to be identified not only as a single defective pixel but also as a group of pixels that are some way defective (col. 1, lines 65-67).

Regarding claim 9, Fossum further teaches adding a column or row addresses where a defect exists to a programmable offset and storing the address with the offset in form of (R, C, T) as described in col. 3, lines 1-23. It is seen that the row and column addresses are added to the indicia and stored in the register to expand the area of a defective group.

Regarding claim 10, Fossum further teaches counters and the like for use to compare the neighborhoods for defective pixels (col. 4, lines 16-20).

Regarding claim 11, Fossum also teaches that the number of spatial defects by column and row is identified by analyzing the data (col. 3, lines 1-23).

Regarding claim 12, Both Therrien and Fossum disclose that the information about the location of defective pixels is stored in a memory (see Therrien, col. 10, lines 38-54 and col. 11, line 50 – col. 12, line 7, and Fossum, col. 2, lines 63-65).

Regarding claim 13, Therrien further discloses that each of RAM 95 (Fig. 7B) is a 1K-10bit RAM which has enough 1024 different 10-bit word to correspondingly store 1024 elements in each line (col. 10, lines 47-53 and col. 11, lines 13-18) and a defect exist bit is represented by the address of the defective pixel itself in the RAM 95.

Regarding claim 15, the imaging system in the combination of Therrien and Fossum would be configured using a software program stored in a storage medium in an alternative configuration that causes a processor-base system to operate as disclosed instead of hardware circuitry as suggested by Fossum in col. 4, lines 24-27.

Regarding claims 16 & 17, see the analyses of claims 3 & 4 and note that the analysis of claim 15 is also applied.

Regarding claim 19, see the analysis of claim 8 and note that the analysis of claim 15 is also applied.

Regarding claims 20 & 21, see the analyses of claims 11 & 12 and note that the analysis of claim 15 is also applied.

Regarding claim 22, see the analysis of claim 1 and Figs. 1-7B in Therrien for a sensing device and circuit configuration.

Regarding claim 23, see the analysis of claim 2. In order to for the digital reference signals 16 and 48 (Therrien, Fig. 4) to be set for high and low limits, a storage for storing these signals is inherent in such an imaging system for the system to function as disclosed.

Regarding claim 24, as clearly disclosed by Therrien, a circuit is adapted to determine the number of spatial defects by analyzing the pixel data as it is read out from said elements (Therrien, col. 2, lines 25-50).

Regarding claim 25, see the analysis of claim 9, wherein “a window circuit” is represented by the circuitry of defective error detection shown in Figs. 1, 4, 5, 7A & B in Therrien and/or Figs. 2 & 3 in Fossum.

Art Unit: 2615

Regarding claim 26, Fossum further teaches a comparator 320 adapted to compare address of a defective pixel to the stored address plus the programmable offset (col. 3, line 55 – col. 4, line 7).

Regarding claims 27 & 28, see the analyses of claims 12 & 13.

Regarding claims 29 & 30, the combination of Therrien and Fossum would be realized that the image sensor and defective pixel detection circuitry would be integrated into a single chip (same die) as shown in Figs. 2 & 3 in Fossum to reduce size and cost of an imaging system.

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nhan T. Tran whose telephone number is (571) 272-7371. The examiner can normally be reached on Monday - Thursday, 7:30am - 5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Ometz can be reached on (571) 272-7593. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2615

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
